

Extracting DNA from fruit

Instructions

1. Mix the washing-up liquid, the water and salt in one cup.

2. Stir gently to mix it all together.

3. Put the fruit in a bag and add the mixture.

4. Squeeze the air out and seal the bag.

5. Squash to break up cells and release the DNA.

6. Pour the fruit mixture through the sieve and into the jug.

7. Half fill a small cup with the liquid from the jug.

8. Slowly pour very cold alcohol down the side of the small cup.

9. You should see white clumps forming in the clear layer... that's DNA!
